

Solar for everyone. No sunny roof needed.

It's easy to access solar power benefits through the Oregon Community Solar Program.

You don't need to own a house, have a sunny roof or invest in an installation to go solar. Simply subscribe to a community solar project through the Oregon Community Solar Program.

- Get solar credits on your bill, offsetting your electricity use. Most customers save money on annual electricity costs.
- Help the planet—reduce your carbon footprint.
- Support local solar development and local clean energy jobs.
- Get discounted rates and additional benefits if you meet low-income guidelines.

Subscribe to a
community solar
project today!

How does community solar work?

1

You sign up as a subscriber to a local solar project.

2

The solar project generates clean, renewable energy for the utility grid.

3

You receive a bill credit for your portion of the solar energy generated and pay a subscription fee on your monthly utility bill. The credit covers the subscription fee and can save money on annual electricity costs.

Oregon renters, condo owners, homeowners and businesses who are customers of Portland General Electric, Pacific Power or Idaho Power are all eligible to participate.

The Oregon Community Solar Program is a state-enabled initiative overseen by the Oregon Public Utility Commission.
